

# A-Level Chemistry <br> Ideal Gas Equation 

Question Paper

Time available: 64 minutes Marks available: 56 marks

This question is about two experiments on gases.
(a) In the first experiment, liquid $\mathbf{Y}$ is injected into a sealed flask under vacuum. The liquid vaporises in the flask.
The table below shows data for this experiment.

| Mass of Y | 717 mg |
| :--- | :---: |
| Temperature | 297 K |
| Volume of flask | $482 \mathrm{~cm}^{3}$ |
| Pressure inside flask | 51.0 kPa |

Calculate the relative molecular mass of $\mathbf{Y}$.
Show your working.
The gas constant, $R=8.31 \mathrm{~J} \mathrm{~K}^{-1} \mathrm{~mol}^{-1}$

Relative molecular mass of $\mathbf{Y}$ $\qquad$
(b) In the second experiment, another flask is used for a combustion reaction.

## Method

- Remove all the air from the flask.
- Add 0.0010 mol of 2,2,4-trimethylpentane $\left(\mathrm{C}_{8} \mathrm{H}_{18}\right)$ to the flask.
- Add 0.0200 mol of oxygen to the flask.
- Spark the mixture to ensure complete combustion.
- Cool the mixture to the original temperature.

The equation is

$$
\mathrm{C}_{8} \mathrm{H}_{18}(\mathrm{~g})+12 \frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 8 \mathrm{CO}_{2}(\mathrm{~g})+9 \mathrm{H}_{2} \mathrm{O}(\mathrm{I})
$$

Calculate the amount, in moles, of gas in the flask after the reaction.

Amount of gas $\qquad$ mol
2.

This question is about a volatile liquid, $\mathbf{A}$.
(a) A student does an experiment to determine the relative molecular mass ( $M_{\mathrm{r}}$ ) of liquid $\mathbf{A}$ using the apparatus shown in the figure below.

The student injects a sample of $\mathbf{A}$ into a gas syringe in an oven.
At the temperature of the oven, liquid $\mathbf{A}$ vaporises.

The table shows the student's results.

| Mass of fine needle syringe and contents before <br> injecting | 11.295 g |
| :--- | ---: |
| Mass of fine needle syringe and contents after injecting | 10.835 g |
| Volume reading on gas syringe before injecting | $0.0 \mathrm{~cm}^{3}$ |
| Volume reading on gas syringe after injecting | $178.0 \mathrm{~cm}^{3}$ |
| Pressure of gas in syringe | 100 kPa |
| Temperature of oven | $120^{\circ} \mathrm{C}$ |

Calculate the $M_{r}$ of $\mathbf{A}$.
Give your answer to 3 significant figures.
The gas constant, $R=8.31 \mathrm{~J} \mathrm{~K}^{-1} \mathrm{~mol}^{-1}$

$$
M_{r}
$$

(b) The student noticed that some of the liquid injected into the gas syringe did not vaporise. Explain the effect that this has on the $M_{r}$ calculated by the student.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

The table is repeated here.

| Mass of fine needle syringe and contents before <br> injecting | 11.295 g |
| :--- | ---: |
| Mass of fine needle syringe and contents after injecting | 10.835 g |
| Volume reading on gas syringe before injecting | $0.0 \mathrm{~cm}^{3}$ |
| Volume reading on gas syringe after injecting | $178.0 \mathrm{~cm}^{3}$ |
| Pressure of gas in syringe | 100 kPa |
| Temperature of oven | $120^{\circ} \mathrm{C}$ |

(c) Each reading on the balance used to record the mass of the fine needle syringe and contents had an uncertainty of $\pm 0.001 \mathrm{~g}$

Calculate the percentage uncertainty in the mass of liquid $\mathbf{A}$ injected in this experiment.

Percentage uncertainty $\qquad$
3. A student does an experiment to determine the percentage of copper in an alloy.

The student

- reacts 985 mg of the alloy with concentrated nitric acid to form a solution (all of the copper in the alloy reacts to form aqueous copper(II) ions)
- pours the solution into a volumetric flask and makes the volume up to $250 \mathrm{~cm}^{3}$ with distilled water
- shakes the flask thoroughly
- transfers $25.0 \mathrm{~cm}^{3}$ of the solution into a conical flask and adds an excess of potassium iodide
- uses exactly $9.00 \mathrm{~cm}^{3}$ of $0.0800 \mathrm{~mol} \mathrm{dm}{ }^{-3}$ sodium thiosulfate $\left(\mathrm{Na}_{2} \mathrm{~S}_{2} \mathrm{O}_{3}\right)$ solution to react with all the iodine produced.

The equations for the reactions are

$$
\begin{gathered}
2 \mathrm{Cu}^{2+}+4 \mathrm{I}^{-} \rightarrow 2 \mathrm{CuI}+\mathrm{I}_{2} \\
2 \mathrm{~S}_{2} \mathrm{O}_{3}{ }^{2-}+\mathrm{I}_{2} \rightarrow 2 \mathrm{I}^{-}+\mathrm{S}_{4} \mathrm{O}_{6}^{2-}
\end{gathered}
$$

(a) Calculate the percentage of copper by mass in the alloy.

Give your answer to the appropriate number of significant figures.
$\qquad$
(b) Suggest two ways that the student could reduce the percentage uncertainty in the measurement of the volume of sodium thiosulfate solution, using the same apparatus as this experiment.

1 $\qquad$
$\qquad$

2 $\qquad$
$\qquad$
3 $\qquad$
$\qquad$
(c) State the role of iodine in the reaction with sodium thiosulfate.
$\qquad$
(d) Give the full electron configuration of a copper(II) ion.
$\qquad$
(e) Copper(I) iodide is a white solid.

Explain why copper $(\mathrm{I})$ iodide is white.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(f) lodine vaporises easily.

Calculate the volume, in $\mathrm{cm}^{3}$, that 5.00 g of iodine vapour occupies at $185^{\circ} \mathrm{C}$ and 100 kPa
The gas constant $R=8.31 \mathrm{~J} \mathrm{~K}^{-1} \mathrm{~mol}^{-1}$
Give your answer to 3 significant figures.
$\qquad$
Volume __ $\mathrm{cm}^{3}$
4. This question is about sodium and some of its compounds.
(a) Use your knowledge of structure and bonding to explain why sodium bromide has a melting point that is higher than that of sodium, and higher than that of sodium iodide.
(b) When 250 mg of sodium were added to $500 \mathrm{~cm}^{3}$ of water at $25^{\circ} \mathrm{C}$ a gas was produced.

Give an equation for the reaction that occurs.
Calculate the volume, in $\mathrm{cm}^{3}$, of the gas formed at 101 kPa
The gas constant, $\mathrm{R}=8.31 \mathrm{~J} \mathrm{~K}^{-1} \mathrm{~mol}^{-1}$
Equation $\qquad$

Volume __ $\mathrm{cm}^{3}$
(c) Calculate the concentration, in $\mathrm{mol} \mathrm{dm}^{-3}$, of sodium ions in the solution produced in the reaction in part (b).

Concentration $\qquad$ $\mathrm{mol} \mathrm{dm}^{-3}$
(d) Sodium reacts with ammonia to form the compound $\mathrm{NaNH}_{2}$ that contains the $\mathrm{NH}_{2}{ }^{-}$ion.

Draw the shape of the $\mathrm{NH}_{2}{ }^{-}$ion.
Include any lone pairs of electrons that influence the shape.
Predict the bond angle.
Justify your prediction.
Shape

Bond angle $\qquad$
Justification $\qquad$
$\qquad$
5. An experiment was carried out to determine the relative molecular mass ( $M_{\mathrm{r}}$ ) of a volatile hydrocarbon $\mathbf{X}$ that is a liquid at room temperature.

A known mass of $\mathbf{X}$ was vaporised at a known temperature and pressure and the volume of the gas produced was measured in a gas syringe.

Data from this experiment are shown in the table.

| Mass of $\mathbf{X}$ | 194 mg |
| :--- | :---: |
| Temperature | 373 K |
| Pressure | 102 kPa |
| Volume | $72 \mathrm{~cm}^{3}$ |

(a) Calculate the relative molecular mass of $\mathbf{X}$.

Show your working.
Give your answer to the appropriate number of significant figures.
The gas constant, $R=8.31 \mathrm{~J} \mathrm{~K}^{-1} \mathrm{~mol}^{-1}$

Relative molecular mass $\qquad$
(b) Analysis of a different hydrocarbon $\mathbf{Y}$ shows that it contains $83.7 \%$ by mass of carbon. Calculate the empirical formula of $\mathbf{Y}$.

Use this empirical formula and the relative molecular mass of $\mathbf{Y}\left(M_{r}=86.0\right)$ to calculate the molecular formula of $\mathbf{Y}$.

Empirical formula $\qquad$

Molecular formula $\qquad$
