Q1. A possible synthesis of 1,4-diaminobenzene is shown below.

- (a) Identify a suitable reagent or combination of reagents for Step 1. Name and outline a mechanism for the reaction.
- (b) Identify a suitable reagent or combination of reagents for Step 2. Name and outline a mechanism for the reaction.
 (6)
- (c) Identify a suitable reagent or combination of reagents for Step 4. Draw the repeating unit of the polymer formed by reaction of 1,4-diaminobenzene with pentanedioic acid.

(3) (Total 15 marks)

(6)

Q2.Refer to the following reaction sequence:

Which one of the following would be the most appropriate to carry out Step 2?

- \mathbf{A} H_2 / Ni
- B Sn / HCl
- C NaBH₄
- **D** Fe / HCl

(Total 1 mark)

Q3.Refer to the following reaction sequence:

Which one of the following types of reaction mechanism is **not** involved in the above sequence?

A electrophilic addition

- B electrophilic substitution
- **C** addition-elimination
- **D** elimination

(Total 1 mark)

Q4.Refer to the following reaction sequence:

$$\begin{array}{c|cccc} COCH_3 & CH(OH)CH_3 \\ \hline & Step 1 & \\ \hline & NO_2 & \\ \hline & NO_2 & \\ \hline & Step 2 & \\ \hline & NO_2 & \\ \hline & Step 3 & \\ \hline & CH = CH_2 & CH = CH_2 \\ \hline & Step 5 & \\ \hline & NH_2 & \\ \hline & NO_2 & \\ \hline & NO_3 & \\ \hline & NO_3 & \\ \hline & NO_4 & \\ \hline & NO_2 & \\ \hline & NO_2 & \\ \hline & NO_3 & \\ \hline & NO_3 & \\ \hline & NO_4 & \\ \hline & NO_4 & \\ \hline & NO_5 & \\$$

Which one of the following types of reaction is **not** involved in the above sequence?

- A acylation
- **B** oxidation
- **C** reduction
- **D** dehydration

(Total 1 mark)

Q5.Which one of the following types of reaction mechanism is **not** involved in the above sequence?

	В	nucl	eophilic substitution	
	С	elim	ination	
	D	nucl	eophilic addition-elimination (Total 1 n	nark)
Q6.		All the P ca	P, Q and R have the molecular formula C ₆ H ₁₂ hree are branched-chain molecules and none is cyclic. hrepresent a pair of optical isomers. has represent a pair of geometrical isomers.	
		R ca	in represent another pair of geometrical isomers different from Q .	
		Drav	v one possible structure for one of the isomers of each of P , Q and R .	
			cture of P cture of Q	
		Struc	cture of R	(2)
				(3)
	(b)		anone reacts with reagent S to form compound T which exists as a racemic ure. Dehydration of T forms U , C₅H₂N, which can represent a pair of geometrical ners.	
		(i)	State the meaning of the term <i>racemic mixture</i> and suggest why such a mixture is formed in this reaction. Racemic mixture	
			Explanation	

free-radical substitution

Α

(ii)	Identify reagent S , and draw a structural formula for each of T and U	
	Reagent S	
	Compound T	
	Compound U	
		(6)
		(6) (Total 9 marks)

Q7.(a) Compound **C**, H₂N(CH₂)₄NH₂, can be synthesised from ethene in three steps as shown below.

Name compound **C** and draw a structure for each of compounds **A** and **B**. State the reagent(s) required for each step and name the type of reaction involved in the conversion of **B** into **C**.

(b) Draw the repeating unit of the polyamide formed when **C** reacts with hexanedioic acid. Discuss the interactions between the chains of the polyamide.

(4)

(7)

(c) Explain why polyamides are degraded by sodium hydroxide whereas polymers such as poly(ethene) are not.

(3) (Total 14 marks)

Q8. Which one of the following types of reaction is not involved in the above sequence?

$$CH_3CH_2CH_3 \longrightarrow (CH_3)_2CHCI \longrightarrow (CH_3)_2CHCN$$

$$\downarrow \qquad \qquad \qquad \\ (CH_3)_2CHCH_2NHCOCH_3 \longleftarrow (CH_3)_2CHCH_2NH_2$$

- **A** halogenation
- **B** acylation
- **C** reduction
- **D** oxidation

(Total 1 mark)
