M1. (a)	(i) Coherent – used to transfer / transmit image (out of body)			
	Coherent – same fibre arrangements at both ends of bundle Allow same relative position		1	
	Do not allow symmetrical		1	
	(ii) Non-coherent – used to transfer light into body (to illuminate)		1	
	Non-coherent – random fibre arrangement along bundle Do not allow not symmetrical		1	
	·		1	
(b)	$\sin \theta_c = 1.49 / 1.52$ $\theta_c = 79 \text{ (degree)}$		1	
				[5]
M2. (a)	Idea that fibres in a coherent bundle maintain the same relative position to each other			
		B1		
	In incoherent bundles the fibres may be in different / random positions (at each end)			
		B1		
	Coherent bundle needs to be used for the observation image. Incoherent bundle may be used for the light transmission			
		B1	3	
(b)	Mentions charge coupled device / CCD			
		B1		
	Capacitor / photosite / photodiode charges / stores charge as light falls on it			
		B1		

		(Pho	otons arriving cause) electrons to be excited / emitted					
				B1				
		Cha	rge depends on light intensity					
				B1				
		Lots	of photosites / concept of pixels					
				B1				
		ANY	/ 2	υ,				
		AINT	3		Max 3			
	(c)	(i)	Core					
	()	()		M0				
			So that total internal reflection can occur					
				A1				
				Λı	1			
		(ii)	79(.4)(°)					
				В1	4			
		/iii\	Day leaving one fibre and entering adjacent fibre		1			
		(iii)	Ray leaving one fibre and entering adjacent fibre	5.4				
				B1				
			Reduces resolution / image will be blurred / less clear / limits angle through which fibre may be bent					
				B1				
					2	[10]		
М3.		` '	horizontal line from A to B at 1.5					
		Vertical line at B from 1.5 to value between 1.5 and 1.4 and then horizontal line from B to C						
		Vert	ical line at C from value to 1.0 (if possible) and then horizontal line fron	n C to	o D			

(b) Use of non-coherent to transmit light into body/ provide illumination
 Use of coherent to transmit image/ light to form an image (from inside to viewer /camera)

[5]

- M4. (a) coherent same relative position of fibres at both ends ✓

 coherent transfers picture from inside of body to viewer ✓

 non-coherent no relative order to the fibres ✓

 non-coherent carries light into body/for illumination ✓
 - (b) $\sin \theta_c = 1.55/1.60 \ \theta_c = 76 \ (75.6) \ (degree) \checkmark$

M5. (a) property explanation

monochromatic waves of single frequency/wavelength

collimated produces an approximately parallel beam

coherent waves produced are in constant phase with each other

two correct properties (1)
each correct explanation (1)(1)

3

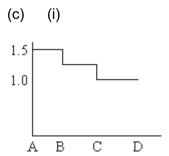

4

1

[5]

- (b) (i) illuminate the inside of a body (1)
 - (ii) stopping bleeding/cutting tissue/treatment of tumours (1)

2

n (constant) = 1.5 from A to B, slight decrease and constant from B to C (1) at C, n decreases to 1, remains at 1 from C to D (1)

$$1.5 = \frac{\sin i}{\sin 10}$$
 (1)
$$i = 15(.1)^{\circ}$$
 (1)

[9]

M6.(a)
$$\frac{\sin i}{\sin r} = \frac{\sin C}{l}$$
 (1) $= \frac{1.40}{1.55} = 0.903$ (1) angle $C = 64.6^{\circ}$ (1)

3

(b) on outer edge only of core (1) two to four reflections (1) [no marks for zig-zag]

2

- (c) (i) smaller difference between the core index and cladding index makes critical angle larger (1) therefore increases the chance of light escaping (1)
 - (ii) makes internal angle of incidence at core-cladding interface more likely to be less than the critical angle (1) therefore increases the chance of light escaping (1)

max 3
