## Gravitational Fields

## Question Paper

Time available: 77 minutes Marks available: 61 marks

1. 

The lines in Figure 1 show the shape of the gravitational field around two stars $\mathbf{G}$ and $\mathbf{H}$.
Figure 1

(a) Compare, with reference to Figure 1, the masses of $\mathbf{G}$ and $\mathbf{H}$.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(b) $\mathbf{X}$ and $\mathbf{Y}$ are two points in the field.

Annotate Figure $\mathbf{1}$ to show the field direction at $\mathbf{X}$ and the field direction at $\mathbf{Y}$.
(c) A spherical asteroid $\mathbf{P}$ has a mass of $2.0 \times 10^{20} \mathrm{~kg}$.

The gravitational field strength at its surface is $0.40 \mathrm{~N} \mathrm{~kg}^{-1}$.
Calculate the radius $R$ of $\mathbf{P}$.

$$
\begin{equation*}
R= \tag{1}
\end{equation*}
$$

$\qquad$ m
(d) Sketch, on Figure 2, the variation of the gravitational field strength $g$ with distance $r$. The distance $r$ is measured from the centre of $\mathbf{P}$.

Figure 2

(e) Explain what is represented by the area under the graph between $r=R$ and $r=2 R$ on Figure 2.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Asteroid $\mathbf{P}$ approaches the two stars $\mathbf{G}$ and $\mathbf{H}$.
Figure 3 shows one position of $\mathbf{P}$ close to $\mathbf{H}$.
Figure 3

(f) The gravitational force on $\mathbf{P}$ from $\mathbf{G}$ is $6.38 \times 10^{12} \mathrm{~N}$.

The mass of $\mathbf{H}$ is $3.00 \times 10^{25} \mathrm{~kg}$ and the mass of $\mathbf{P}$ is $2.00 \times 10^{20} \mathrm{~kg}$.
The distance HP is $1.50 \times 10^{11} \mathrm{~m}$.
Calculate the magnitude of the acceleration of $\mathbf{P}$.
magnitude of acceleration = $\qquad$ $\mathrm{m} \mathrm{s}^{-2}$
(g) Explain why $\mathbf{P}$ cannot have a circular orbit around $\mathbf{H}$.
$\qquad$
$\qquad$
$\qquad$
2. (a) Derive an expression to show that for satellites in a circular orbit

$$
T^{2} \propto r^{3}
$$

where $T$ is the period of orbit and $r$ is the radius of the orbit.
(b) Pluto is a dwarf planet. The mean orbital radius of Pluto around the Sun is $5.91 \times 10^{9} \mathrm{~km}$ compared to a mean orbital radius of $1.50 \times 10^{8} \mathrm{~km}$ for the Earth.

Calculate in years the orbital period of Pluto.

```
orbital period of Pluto =
```

$\qquad$

``` yr
```

(c) A small mass released from rest just above the surface of Pluto has an acceleration of $0.617 \mathrm{~m} \mathrm{~s}^{-2}$.

Assume Pluto has no atmosphere that could provide any resistance to motion.
Calculate the mass of Pluto.
Give your answer to an appropriate number of significant figures.
radius of Pluto $=1.19 \times 10^{6} \mathrm{~m}$
$\qquad$ kg
(d) The graph shows the variation in gravitational potential with distance from the centre of Pluto for points at and above its surface.

A meteorite hits Pluto and ejects a lump of ice from the surface that travels vertically at an initial speed of $1400 \mathrm{~m} \mathrm{~s}^{-1}$.

Determine whether this lump of ice can escape from Pluto.
$\qquad$
$\qquad$
3. (a) Define the gravitational potential at a point.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(b) Explain why gravitational potential is always negative.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(c) Show that the magnitude of the gravitational potential at the Earth's surface due to the mass of the Earth is about $6.3 \times 10^{7} \mathrm{~J} \mathrm{~kg}^{-1}$.
(2)
(d) A satellite is launched into a geostationary orbit.

Describe and explain two features of a geostationary orbit.
1.
$\qquad$
$\qquad$
2. $\qquad$
$\qquad$
$\qquad$
(e) The satellite has a mass of 1200 kg and the radius of its orbit is $4.23 \times 10^{7} \mathrm{~m}$.

Calculate the gain in gravitational potential energy of the satellite when it is placed into orbit from the Earth's surface.
gain in potential energy = $\qquad$ J
(f) Impulse engines are used to place the satellite into an orbit with a longer period.

Discuss any changes this makes to the orbital motion of the satellite.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
4. (a) Explain why astronauts in an orbiting space vehicle experience the sensation of weightlessness.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(b) A space vehicle has a mass of 16800 kg and is in orbit 900 km above the surface of the Earth.

$$
\text { mass of the Earth }=5.97 \times 10^{24} \mathrm{~kg}
$$

radius of the Earth $=6.38 \times 10^{6} \mathrm{~m}$
(i) Show that the orbital speed of the vehicle is approximately $7400 \mathrm{~m} \mathrm{~s}^{-1}$.
(ii) The space vehicle moves from the orbit 900 km above the Earth's surface to an orbit 400 km above the Earth's surface where the orbital speed is $7700 \mathrm{~m} \mathrm{~s}^{-1}$.

Calculate the total change that occurs in the energy of the space vehicle.
Assume that the vehicle remains outside the atmosphere after the change of orbit. Use the value of $7400 \mathrm{~m} \mathrm{~s}^{-1}$ for the speed in the initial orbit.
$\qquad$ J

Figure 1 shows (not to scale) three students, each of mass 50.0 kg , standing at different points on the Earth's surface. Student $\mathbf{A}$ is standing at the North Pole and student $\mathbf{B}$ is standing at the equator.

Figure 1

The radius of the Earth is 6370 km .
The mass of the Earth is $5.98 \times 10^{24} \mathrm{~kg}$.
In this question assume that the Earth is a perfect sphere.
(a) (i) Use Newton's gravitational law to calculate the gravitational force exerted by the Earth on a student.
force $\qquad$ N
(ii) Figure 2 shows a closer view of student $\mathbf{A}$.

Draw, on Figure 2, vector arrows that represent the forces acting on student A.
(b) (i) Show that the linear speed of student $\mathbf{B}$ due to the rotation of the Earth is about $460 \mathrm{~m} \mathrm{~s}^{-1}$.
(ii) Calculate the magnitude of the centripetal force required so that student $\mathbf{B}$ moves with the Earth at the rotational speed of $460 \mathrm{~m} \mathrm{~s}^{-1}$.
magnitude of the force $\qquad$ N
(iii) Show, on Figure 1, an arrow showing the direction of the centripetal force acting on student C.
(c) Student B stands on a bathroom scale calibrated to measure weight in newton ( N ). If the Earth were not rotating, the weight recorded would be equal to the force calculated in part (a)(i).

State and explain how the rotation of the Earth affects the reading on the bathroom scale for student B.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
