## Mark schemes

1.

(a) (diagram) gas syringe

or

inverted measuring cylinder over water

1

(b) (error) (delivery) tube is in (sulfuric) acid

1

(problem) (sulfuric) acid will travel up tube

no hydrogen / gas will be collected

1

(c) line of best fit

must include 0, 0

1

(d) (volume of gas =)  $45 \text{ (cm}^3$ )

> allow a tolerance of  $\pm \frac{1}{2}$  a small square allow volume from drawn curve

> > 1

$$(rate =) \frac{45}{60}$$

allow correct use of incorrectly determined volume at 60 seconds

1

= 0.75

1

1

1

cm<sup>3</sup>/s

(e) the line of best fit for higher concentration would have a steeper slope

[9]

2.

(delivery) tube is in (sulfuric) acid (a)

1

(b) reaction has stopped

allow no more gas produced

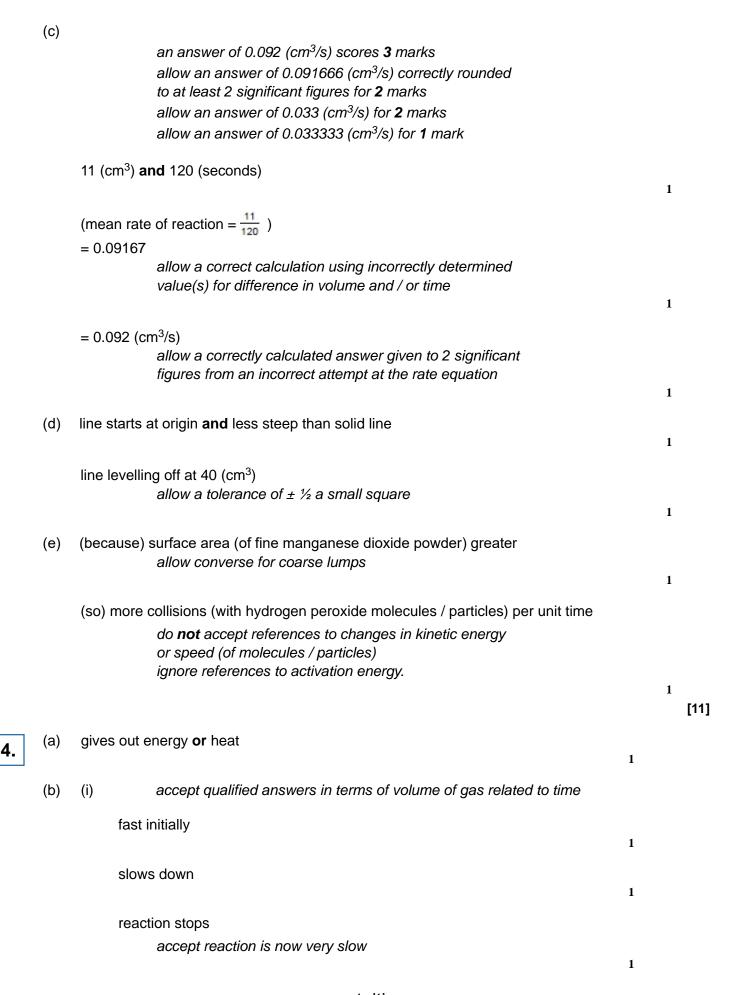

1

(because a) reactant is used up

allow named reactants

1

|    | (c) | any <b>one</b> from:   |             |
|----|-----|--|-------------|
|    |     | • the line (for 0.05 mol/dm³ sulfuric acid) is less steep  |             |
|    |     | allow converse statements about 0.10 mol/dm <sup>3</sup> sulfuric<br>acid  |             |
|    |     | ignore produces less gas   |             |
|    |     | <ul> <li>(0.05 mol/dm<sup>3</sup> sulfuric acid) produces less gas in a fixed time<br/>do not accept produces less gas in total</li> </ul> |             |
|    |     | • the reaction (using 0.05 mol/dm³ sulfuric acid) takes longer to finish   | 1           |
|    | (d) | tangent drawn at 80 s on 0.05 mol/dm <sup>3</sup> curve  | 1           |
|    |     | (from tangent)   |             |
|    |     | value for x-step   |             |
|    |     | and value for <i>y</i> -step   |             |
|    |     | allow a tolerance of $\pm \frac{1}{2}$ a small square  |             |
|    |     |  | 1           |
|    |     | (rate =) $\frac{\text{value for } y\text{-step}}{\text{value for } x\text{-step}}$   |             |
|    |     | allow correct use of incorrectly determined values from  |             |
|    |     | tangent for x-step and/or y-step   |             |
|    |     |  | 1           |
|    |     | calculation of rate  | 1           |
|    |     | answer to 2 significant figures  |             |
|    |     | allow an answer correctly calculated to 2 significant  |             |
|    |     | figures from an incorrect calculation of rate  |             |
|    |     |  | 1           |
|    | (e) | Cu <sup>2+</sup>   | 1           |
|    |     |  | [10]        |
|    | (a) | glowing splint   |             |
| 3. | ()  | do <b>not</b> accept burning splint  |             |
|    |     |  | 1           |
|    |     | (which) relights   |             |
|    |     | dependent on correct test in MP1 ignore with a pop   |             |
|    |     | ignore war a pop   | 1           |
|    | (b) | place the conical flask in a water bath at constant temperature.   |             |
|    |     |  | 1           |
|    |     | use a mass of 1 g manganese dioxide each time.   |             |
|    |     | www.accesstuition.com  | Page 4 of 8 |

| (b) | (ii) 21   | 1                |        |
|-----|---|------------------|--------|
|     | (iii) 84  | -                |        |
|     | correct answer with or without working = <b>2</b> marks   |                  |        |
|     | allow ecf from (b)(ii) correctly calculated for 2 marks   |                  |        |
|     | allow evidence of 21/25 or (b)(ii)/25 for 1 mark  |                  |        |
|     |   | 2                |        |
| (c) | because they / particles have more energy / move faster   |                  |        |
|     | ignore particles move more / vibrate  |                  |        |
|     |   | 1                |        |
|     | (and so) particles collide more often / more frequently or particles more likely to   | collide          |        |
|     | ignore collide faster   |                  |        |
|     | ignore more collisions  | 1                |        |
|     |   |                  |        |
|     | (and) more of the collisions are successful <b>or</b> particles collide with more energy / more of the particles have the activation energy | harder <b>or</b> |        |
|     | accept more successful collisions   | 1                |        |
|     |   | 1                | [10]   |
|     |   |                  |        |
| (a) | (sulfur is a) precipitate / solid  or   |                  |        |
|     | (sulfur is an) insoluble substance  |                  |        |
|     |   | 1                |        |
| (b) | View with Figure 1  |                  |        |
|     | correctly drawn tangent at 30 s   |                  |        |
|     |   | 1                |        |
|     | correct values for x step and y step from tangent   |                  |        |
|     | allow correct use of an incorrectly drawn tangent   |                  |        |
|     | allow a tolerance of $\pm \frac{1}{2}$ a small square for each coordinate   |                  |        |
|     |   | 1                |        |
|     | (ratio =) value for y step<br>value for x step  |                  |        |
|     | •   |                  |        |
|     | allow correct use of incorrectly determined values from tangent for x step and/or y step  |                  |        |
|     |   | 1                |        |
|     | correct calculation of ratio  |                  |        |
|     |   | 1                |        |
|     | (conversion rate = ratio $\times$ 7.1 $\times$ 10 <sup>-5</sup> )   |                  |        |
|     | correct evaluation of rate (mol/s)  |                  |        |
|     | allow correct use of an incorrectly calculated ratio  |                  |        |
|     | www.accesstuition.com   | 1                |        |

5.

| (c) | rate decreases   |   |  |  |  |
|-----|--|---|--|--|--|
|     | allow the collision frequency decreases  |   |  |  |  |
|     | (because) concentration of reactants decreases   | 1 |  |  |  |
|     | alternative approach:  |   |  |  |  |
|     | greatest rate at start (1)  allow the collision frequency is highest at the start  |   |  |  |  |
|     | (because) greatest concentration of reactants at start (1)   |   |  |  |  |
| (d) | (hydrochloric) acid is used up  allow (hydrochloric) acid is the limiting reactant  ignore reactants used up                       | 1 |  |  |  |
| (e) | View with Figure 3   |   |  |  |  |
|     | decreasing curve starting at 0,95 <b>and</b> steeper initially than curve for 0.10 mol/dm <sup>3</sup> sodium thiosulfate solution |   |  |  |  |
|     | levelling at 24%   | 1 |  |  |  |
| (f) | stop light from other sources reaching the light sensor  | 1 |  |  |  |
| (g) | repeatable   | 1 |  |  |  |
| (h) | $V \propto m$  | 1 |  |  |  |

## (i) View with Figure 4

volume of sodium thiosulfate solution **and** volume of hydrochloric acid at any fixed mass

allow a tolerance of  $\pm \frac{1}{2}$  a small square for volume readings

$$\left(\frac{\text{volume of Na}_2S_2O_3 \text{ solution}}{\text{volume of hydrochloric acid}}\right) = 0.25$$

$$allow \left( \frac{volume \ of \ hydrochloric \ acid}{volume \ of \ Na_2S_2O_3 \ solution} = \right) 4$$

allow correct use of incorrectly determined volumes
