Unit Physics P1

Thursday 12 June 2014 9.00 am to 10.00 am

For this paper you must have:

- a ruler
- a calculator
- the Physics Equations Sheet (enclosed).

Time allowed

- 1 hour

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 60.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.
- Question 9 should be answered in continuous prose.
In this question you will be marked on your ability to:
 - use good English
 - organise information clearly
 - use specialist vocabulary where appropriate.

Advice

- In all calculations, show clearly how you work out your answer.

G/KL/104918/Jun14/E6

PH1FP

Answer **all** questions in the spaces provided.

1 **Figure 1** shows a car with an electric motor.

The car is moving along a flat road.

Figure 1

1 (a) (i) Use the correct answers from the box to complete each sentence.

[3 marks]

light	electrical	kinetic	potential	sound
--------------	-------------------	----------------	------------------	--------------

The car's motor transfers energy
into useful energy as the car moves.
Some energy is wasted as energy.

1 (a) (ii) What happens to the wasted energy?

[1 mark]

.....
.....

1 (b) The electric motor has an input energy of 50 000 joules each second.
The motor transfers 35 000 joules of useful energy each second.
Calculate the efficiency of the electric motor.
Use the correct equation from the Physics Equations Sheet.

[2 marks]

.....
.....
.....

Efficiency =

6

Turn over ►

2 (a) Figure 2 shows a signal generator connected to a loudspeaker.

The signal generator is adjusted to change the sound wave produced by the loudspeaker.

Figure 2

A microphone connected to a cathode ray oscilloscope (CRO) is used to detect the sound waves from the loudspeaker.

Figure 3 shows the CRO traces, **A**, **B** and **C**, produced by three different sound waves.

The settings on the CRO were the same for each trace.

Figure 3

Use the correct letter, **A**, **B** or **C**, to complete each sentence.

2 (a) (i) The sound wave with the highest frequency is shown by trace

[1 mark]

2 (a) (ii) The sound wave with the smallest amplitude is shown by trace

[1 mark]

- 2 (b)** The loudspeaker produces a sound wave with a frequency of 850 hertz and a wavelength of 0.4 metres.

Calculate the speed of this sound wave. Give the unit.

Use the correct equation from the Physics Equations Sheet.

Choose the unit from the list below.

joules

metres/second

watts

[3 marks]

.....

.....

.....

Speed =

- 2 (c)** A motorbike is driven towards a microphone and CRO which are placed by the side of the road.

The motorbike emits a sound wave of constant frequency.

Draw a ring around the correct answer to complete each sentence.

[2 marks]

As the motorbike moves towards the microphone, the frequency of the sound wave

detected by the microphone will be

higher than
the same as
lower than

 the frequency of the sound wave produced by the motorbike.

The wavelength of the sound wave detected by the microphone will be

longer than
the same as
shorter than

 the wavelength of the sound wave from the motorbike.

7

Turn over ►

3 Energy can be transferred through some materials by convection.

3 (a) Use the correct answer from the box to complete the sentence.

[1 mark]

gas	liquid	solid
-----	--------	-------

Energy **cannot** be transferred by convection through a

3 (b) **Figure 4** shows a fridge with a freezer compartment.

The temperature of the air inside the freezer compartment is $-5\text{ }^{\circ}\text{C}$.

Figure 4

Use the correct answer from the box to complete each sentence.

Each answer may be used once, more than once or not at all.

[3 marks]

decreased	unchanged	increased
-----------	-----------	-----------

When the air near the freezer compartment is cooled, the energy of the air particles is

The spaces between the air particles are

The density of the air is

3 (c) **Table 1** shows some information about three fridges, **A**, **B** and **C**.

The efficiency of each fridge is the same.

Table 1

Fridge	Volume in litres	Energy used in one year in kWh
A	232	292
B	382	409
C	622	524

3 (c) (i) Which fridge, **A**, **B** or **C**, would cost the least to use for 1 year?

[2 marks]

Give **one** reason for your answer.

.....

.....

3 (c) (ii) A householder looks at the data in **Table 1**.

What should she conclude about the pattern linking the volume of the fridge and the energy it uses in one year?

[1 mark]

.....

.....

3 (c) (iii) The householder could not be certain that her conclusion is correct for all fridges.

Suggest **one** reason why not.

[1 mark]

.....

.....

4 Iceland is a country that generates most of its electricity using geothermal power stations and hydroelectric power stations.

4 (a) (i) Complete the following sentences to describe how some geothermal power stations work.

[3 marks]

In regions where volcanoes are active, the ground is hot.

Cold is pumped down into the ground

and is by hot rocks.

It returns to the surface as steam. The steam is used to turn a turbine.

The turbine drives a to produce electricity.

4 (a) (ii) Which **one** of the following statements about geothermal power stations is true?

Tick (✓) **one** box.

[1 mark]

Geothermal power stations use fossil fuels.

Geothermal power stations produce carbon dioxide.

Geothermal power stations provide a reliable source of electricity.

4 (b) What is needed for a hydroelectric power station to be able to generate electricity?

Tick (✓) **one** box.

[1 mark]

Falling water

A long coastline

Lots of sunny days

5

Turn over ►

5 A student used the apparatus in **Figure 5** to compare the energy needed to heat blocks of different materials.

Each block had the same mass.

Each block had holes for the thermometer and the immersion heater.

Each block had a starting temperature of 20 °C.

Figure 5

The student measured the time taken to increase the temperature of each material by 5 °C.

5 (a) (i) State **two** variables the student controlled.

[2 marks]

1

2

Figure 6 shows the student's results.

5 (a) (ii) Why was a bar chart drawn rather than a line graph?

[1 mark]

.....

.....

5 (a) (iii) Which material was supplied with the most energy?

.....

Give the reason for your answer.

[2 marks]

.....

.....

Question 5 continues on the next page

Turn over ►

5 (a) (iv) The iron block had a mass of 2 kg.

Calculate the energy transferred by the heater to increase the temperature of the iron block by 5 °C.

Use the correct equation from the Physics Equations Sheet.

The specific heat capacity of iron is 450 J/kg °C.

[2 marks]

.....

.....

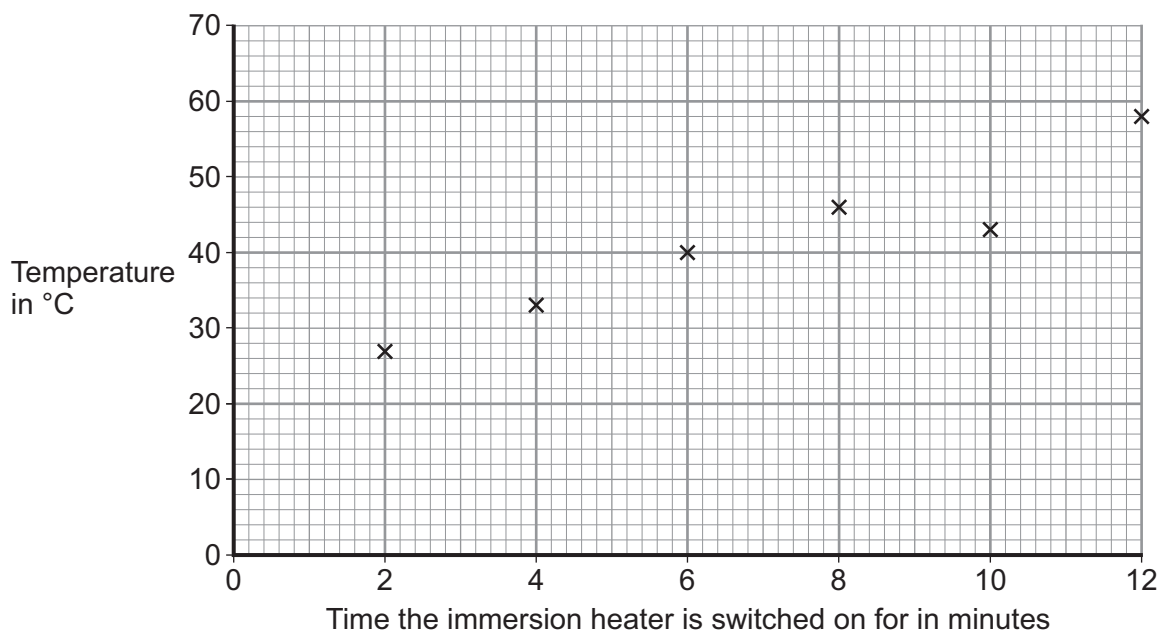

.....

Energy transferred = J

5 (b) The student used the same apparatus to heat a 1 kg block of aluminium.
He recorded the temperature of the block as it was heated from room temperature.
The results are shown in **Figure 7**.

Figure 7

5 (b) (i) One of the student's results is anomalous.

Draw a ring around the anomalous result.

[1 mark]

5 (b) (ii) Draw the line of best fit for the points plotted in **Figure 7**.

[1 mark]

5 (b) (iii) What was the temperature of the room?

[1 mark]

Temperature = °C

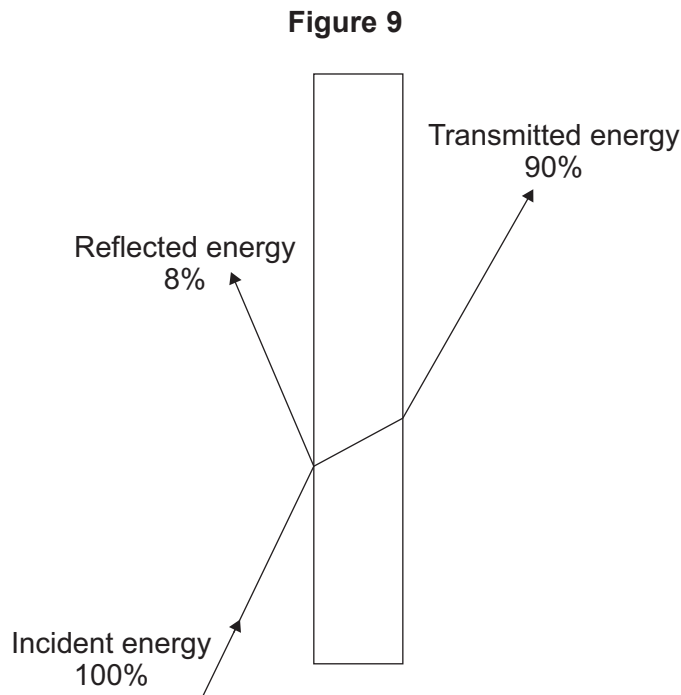

5 (b) (iv) What was the interval of the time values used by the student?

[1 mark]

Interval = minutes

6 (b) Figure 9 shows what happens to the light energy when a ray of light hits a glass block.

98% of the incident energy is either reflected or transmitted by the glass block.

What happens to the other 2% of the incident energy?

[1 mark]

.....

.....

Question 6 continues on the next page

Turn over ►

6 (c) Bottled beer will spoil if the intensity of the light passing through the glass bottle into the beer is too high.

Figure 10 shows the intensity of the light that is transmitted through three different pieces of glass.

Figure 10

6 (c) (i) The pieces of glass all had the same thickness.

Suggest why.

[1 mark]

.....

.....

6 (c) (ii) Bottles made of brown glass are suitable for storing beer.

Suggest why.

[1 mark]

.....

.....

7 Electricity can be generated using various energy sources.

7 (a) Give **one** advantage and **one** disadvantage of using nuclear power stations rather than gas-fired power stations to generate electricity.

[2 marks]

Advantage

.....

Disadvantage

.....

7 (b) (i) A single wind turbine has a maximum power output of 2 000 000 W.

The wind turbine operated continuously at maximum power for 6 hours.

Calculate the energy output in kilowatt-hours of the wind turbine.

Use the correct equation from the Physics Equations Sheet.

[2 marks]

.....

.....

.....

Energy output = kWh

7 (b) (ii) Why, on average, do wind turbines operate at maximum power output for only 30% of the time?

[1 mark]

.....

.....

7 (c) An on-shore wind farm is made up of many individual wind turbines.

They are connected to the National Grid using underground power cables.

Give **one** advantage of using underground power cables rather than overhead power cables.

[1 mark]

.....

.....

6

Turn over ►

- 8 **Figure 11** shows one way that biscuit manufacturers cook large quantities of biscuits. The uncooked biscuits are placed on a moving metal grid. The biscuits pass between two hot electrical heating elements inside an oven. The biscuits turn brown as they cook.

Figure 11

The oven has two control knobs, as shown in **Figure 12**.

Figure 12

- 8 (a) Which type of electromagnetic radiation makes the biscuits turn brown?

[1 mark]

.....

- 8 (b) Suggest **two** ways of cooking the biscuits in this oven, to make them turn browner.

[2 marks]

1

.....

2

.....

8 (c) The inside and outside surfaces of the oven are light-coloured and shiny.

Explain why.

[3 marks]

.....

.....

.....

.....
