Paper 1 Higher Tier
Mark scheme
June 2022
Version: 1.0 Final Mark Scheme

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

## Information to Examiners

## 1. General

The mark scheme for each question shows:

- the marks available for each part of the question
- the total marks available for the question
- the typical answer or answers which are expected
- extra information to help the examiner make their judgement
- the Assessment Objectives and specification content that each question is intended to cover.

The extra information is aligned to the appropriate answer in the left-hand part of the mark scheme and should only be applied to that item in the mark scheme.

At the beginning of a part of a question a reminder may be given, for example: where consequential marking needs to be considered in a calculation; or the answer may be on the diagram or at a different place on the script.

In general the right-hand side of the mark scheme is there to provide those extra details which confuse the main part of the mark scheme yet may be helpful in ensuring that marking is straightforward and consistent (for example, a scientifically correct answer that could not reasonably be expected from a student's knowledge of the specification).

## 2. Emboldening and underlining

2.1 In a list of acceptable answers where more than one mark is available 'any two from' is used, with the number of marks emboldened. Each of the following bullet points is a potential mark.
2.2 A bold and is used to indicate that both parts of the answer are required to award the mark.
2.3 Alternative answers acceptable for a mark are indicated by the use of or.

Alternative words in the mark scheme are shown by a solidus eg allow smooth / free movement.
2.4 Any wording that is underlined is essential for the marking point to be awarded.

## 3. Marking points

### 3.1 Marking of lists

This applies to questions requiring a set number of responses, but for which students have provided extra responses. The general principle to be followed in such a situation is that 'right + wrong = wrong'.

Each error / contradiction negates each correct response. So, if the number of errors / contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as *in example 1) are not penalised.
Example 1: What is the pH of an acidic solution?
[1 mark]

| Student | Response | Marks <br> awarded |
| :---: | :---: | :---: |
| 1 | green, 5 | 0 |
| 2 | red $^{*}, 5$ | 1 |
| 3 | red $^{*}, 8$ | 0 |

Example 2: Name two magnetic materials.
[2 marks]

| Student | Response | Marks awarded |
| :---: | :---: | :---: |
| 1 | iron, steel, tin | 1 |
| 2 | cobalt, nickel, nail ${ }^{*}$ | 2 |

### 3.2 Use of symbols / formulae

If a student writes a chemical symbol / formula instead of a required chemical name, or uses symbols to denote quantities in a physics equation, full credit can be given if the symbol / formula is correct and if, in the context of the question, such action is appropriate.

### 3.3 Marking procedure for calculations

Marks should be awarded for each stage of the calculation completed correctly, as students are instructed to show their working. At any point in a calculation students may omit steps from their working. If a subsequent step is given correctly, the relevant marks may be awarded.

Full marks are not awarded for a correct final answer from incorrect working.

### 3.4 Interpretation of 'it'

Answers using the word 'it' should be given credit only if it is clear that the 'it' refers to the correct subject.

### 3.5 Errors carried forward

An error can be carried forward from one question part to the next and is shown by the abbreviation 'ecf'.

Within an individual question part, an incorrect value in one step of a calculation does not prevent all of the subsequent marks being awarded.

### 3.6 Phonetic spelling

Marks should be awarded if spelling is not correct but the intention is clear, unless there is a possible confusion with another technical term.

### 3.7 Brackets

(.....) are used to indicate information which is not essential for the mark to be awarded but is included to help the examiner identify the sense of the answer required.

### 3.8 Allow

In the mark scheme additional information, 'allow' is used to indicate creditworthy alternative answers.

### 3.9 Ignore

Ignore is used when the information given is irrelevant to the question or not enough to gain the marking point. Any further correct amplification could gain the marking point.

### 3.10 Do not accept

Do not accept means that this is a wrong answer which, even if the correct answer is given as well, will still mean that the mark is not awarded.

### 3.11 Numbered answer lines

Numbered lines on the question paper are intended to support the student to give the correct number of responses. The answer should still be marked as a whole.

## 4. Level of response marking instructions

Extended response questions are marked on level of response mark schemes.

- Level of response mark schemes are broken down into levels, each of which has a descriptor.
- The descriptor for the level shows the average performance for the level.
- There are two marks in each level.

Before you apply the mark scheme to a student's answer, read through the answer and, if necessary, annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme.

## Step 1: Determine a level

Start at the lowest level of the mark scheme and use it as a ladder to see whether the answer meets the descriptor for that level.

The descriptor for the level indicates the different qualities that might be seen in the student's answer for that level. If it meets the lowest level then go to the next one and decide if it meets this level, and so on, until you have a match between the level descriptor and the answer. With practice and familiarity you will find that for better answers you will be able to quickly skip through the lower levels of the mark scheme.

When assigning a level you should look at the overall quality of the answer. Do not look to penalise small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level.

Use the variability of the response to help decide the mark within the level, ie if the response is predominantly level 2 with a small amount of level 3 material it would be placed in level 2 but be awarded a mark near the top of the level because of the level 3 content.

## Step 2: Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will help. There will be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example.

You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the indicative content to reach the highest level of the mark scheme.

You should ignore any irrelevant points made. However, full marks can be awarded only if there are no incorrect statements that contradict a correct response.

An answer which contains nothing of relevance to the question must be awarded no marks.

## Question 1

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| 01.1 | D |  | 1 | AO3 <br> AO |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| 01.2 | B |  | 1 | AO3 <br> 4.13 .2 |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{0 1 . 3}$ |  | allow converse statements for <br> transition elements |  | AO1 |
|  | any two from: <br> (Group 1 elements) <br> - have lower melting / boiling <br> points <br> - have lower densities <br> - are less strong <br> - are softer | allow (Group 1 elements are) <br> more malleable / ductile | 2 | 4.1 .3 .2 |
|  |  | allow (Group 1 elements) are <br> not useful as catalysts |  |  |

| Question | Answers | Extra information | MarkAO / <br> Spec. Ref. |
| :--- | :---: | :---: | :---: | :---: |
| 01.4 | allow any combination of <br> $\mathrm{x}, \bullet, \mathrm{o}, \mathrm{e}^{(-)}$for electrons | 1 | AO2 <br> 4.1 .1 .7 |
|  |  |  |  |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{0 1 . 5}$ | delocalised electrons |  |  |  |
|  | (the electrons) carry (electrical) <br> charge | allow free electrons <br> ignore current / electricity for <br> charge | 1 | 4.2 .2 .8 |
|  | (the electrons move) through the <br> metal / aluminium / structure | ignore throughout for through | 1 | AO1 |
|  |  | 1.2 .1. |  |  |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| 01.6 | ionic |  | 1 | AO1 <br> 4.2 .1 .1 |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{0 1 . 7}$ | magnesium (atom) loses <br> electrons <br> oxygen (atom) gains electrons <br> two electrons (are transferred) <br> magnesium ions and oxide ions <br> are formed | allow Mg2+ (ions) and O2- (ions) <br> are formed <br> allow magnesium forms positive <br> ions and oxygen forms negative <br> ions <br> allow (both) form a complete <br> outer shell | 1 | AO2 |
|  |  |  | 1 | 4.2 .1 .12 |

## Question 2

| Question | Answers | Mark | AOI <br> Spec. Ref |
| :---: | :---: | :---: | :---: |
| 02.1 | Level 3: The method would lead to the production of a valid outcome. The key steps are identified and logically sequenced. | 5-6 | $\begin{gathered} \text { AO1 } \\ \text { 4.5.1.1 } \\ \text { RPA } 4 \end{gathered}$ |
|  | Level 2: The method would not necessarily lead to a valid outcome. Most steps are identified, but the plan is not fully logically sequenced. | 3-4 |  |
|  | Level 1: The method would not lead to a valid outcome. Some relevant steps are identified, but links are not made clear. | 1-2 |  |
|  | No relevant content | 0 |  |
|  | Indicative content <br> - measure volume of (hydrochloric) acid <br> - with a measuring cylinder <br> - pour (hydrochloric) acid into a suitable container eg polystyrene cup <br> - measure the initial temperature (of hydrochloric acid) <br> - with a thermometer <br> - add a known mass of sodium carbonate <br> - measured with a balance <br> - stir <br> - measure the highest temperature reached <br> - repeat with different masses of sodium carbonate or add successive masses of sodium carbonate to the same mixture <br> - repeat the whole investigation <br> - use the same starting temperature <br> - use the same volume of (hydrochloric) acid each time <br> - use the same concentration of (hydrochloric) acid each time |  |  |

| Question | Answers | Extra information | Mark | AO I <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| 02.2 <br> View with Figure 3 | change in highest temperature | allow a tolerance of $\pm 1 / 2$ a small square | 1 | $\begin{gathered} \text { AO2 } \\ \text { 4.5.1.1 } \\ \text { RPA } 4 \end{gathered}$ |
|  | corresponding change in mass | allow a tolerance of $\pm 1 / 2$ a small square | 1 |  |
|  | (gradient =) <br> change in highest temperature <br> change in mass | allow correct use of an incorrectly determined change in highest temperature and / or change in mass | 1 |  |
|  | $($ gradient $=$ ) 1.6 |  | 1 |  |
|  | ${ }^{\circ} \mathrm{C} / \mathrm{g}$ | allow ${ }^{\circ} \mathrm{C} / \mathrm{gram}(\mathrm{s})$ | 1 |  |

| Question | Answers | Extra information | Mark | AO I <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| 02.3 <br> View with Figure 3 | extrapolates line to the $y$-axis $20.6\left({ }^{\circ} \mathrm{C}\right)$ <br> alternative approach: <br> (highest temperature at 1.0 g change in highest temperature per gram =) $22.2-1.6 \text { (1) }$ $=20.6\left({ }^{\circ} \mathrm{C}\right)(1)$ | allow a tolerance of $\pm 1 / 2$ a small square <br> allow a correctly determined value from an incorrectly extrapolated line <br> allow correct use of value determined for gradient in question 02.2 | $1$ | $\begin{gathered} \text { AO2 } \\ \text { 4.5.1.1 } \\ \text { RPA } 4 \end{gathered}$ |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |

| :---: | :---: | :---: | :---: | :---: |
| 05.3 | $2 \mathrm{Rb}+2 \mathrm{H}_{2} \mathrm{O} \rightarrow 2 \mathrm{RbOH}+\mathrm{H}_{2}$ | ignore state symbols allow multiples allow 1 mark for $\mathrm{H}_{2}$ allow 1 mark for RbOH | 3 | $\begin{gathered} \mathrm{AO} 2 \\ \text { 4.1.1.1 } \\ \text { 4.1.2.5 } \\ \text { 4.3.1.1 } \end{gathered}$ |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :---: | :---: | :---: |
| $\mathbf{0 5 . 4}$ | the noble gases have boiling <br> points that increase going down <br> the group |  | 1 | AO1 <br> 4.1 .2 .4 |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{0 5 . 5}$ | $($ relative atomic mass $=)$ <br> $(90.48 \times 20)+(0.27 \times 21)+(9.25 \times 22)$ <br> 100 | allow (relative atomic mass =) <br> $\frac{1809.6+5.67+203.5}{100}$ <br> allow (relative atomic mass =) <br> $18.096+0.0567+2.035$ | 1 | AO2 <br> $=20.1877$ <br> $=20.2$ |
|  | allow an answer correctly <br> rounded to 3 significant figures <br> from an incorrect calculation <br> which uses all of the values in <br> Table 1 <br> ignore units | 1 | 1 |  |

## Question 6

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{0 6 . 1}$ | $\mathrm{Na}^{+}+\mathrm{e}^{-} \rightarrow \mathrm{Na}$ |  | 1 | $\mathrm{AO2}$ |
|  |  |  | 4.4 .3 .2 |  |
|  |  |  | 4.4 .3 .5 |  |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :---: | :---: | :---: |
| $\mathbf{0 6 . 2}$ | so the products do not react (to <br> reform sodium chloride) |  | 1 | AO3 <br> 4.4 .3 .2 |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{0 6 . 3}$ | ion |  | 1 | AO3 <br> 4.4 .3 .2 |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :---: | :---: | :---: |
| $\mathbf{0 6 . 4}$ | hydrogen $/ \mathrm{H}^{+}$(ions) |  |  |  |
| hydroxide $/ \mathrm{OH}^{-}$(ions) |  | 1 | AO 1 <br> 4.4 .3 .4 |  |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{0 6 . 5}$ | sodium hydroxide | allow NaOH |  | AO2 |

| Question | Answers | Extra information | Mark | $\begin{array}{c}\text { AO / } \\ \text { Spec. Ref. }\end{array}$ |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{0 6 . 6}$ | $\begin{array}{l}\text { sodium ions and hydroxide ions } \\ \text { are left (in solution) } \\ \text { (because) hydrogen ions are } \\ \text { discharged / reduced (at the } \\ \text { negative electrode to form } \\ \text { hydrogen) }\end{array}$ | $\begin{array}{l}\text { allow (because) hydrogen ions } \\ \text { gain electrons (at the negative } \\ \text { electrode to form hydrogen) }\end{array}$ | 1 | $\begin{array}{c}\text { AO2 } \\ \text { allow (because at the negative } \\ \text { electrode) } \\ 2 \mathrm{H}^{+}+2 \mathrm{e}^{-} \rightarrow \mathrm{H}_{2}\end{array}$ |
|  | $\begin{array}{l}\text { (and because) chloride ions are } \\ \text { discharged / oxidised (at the } \\ \text { positive electrode to form } \\ \text { chlorine) }\end{array}$ | $\begin{array}{l}\text { allow (and because) chloride } \\ \text { ions lose electrons (at the } \\ \text { positive electrode to form } \\ \text { chlorine) } \\ \text { allow (and because at the }\end{array}$ | 1 |  |
| positive electrode) |  |  |  |  |
| $2 \mathrm{Cl}^{-} \rightarrow \mathrm{Cl}_{2}+2 \mathrm{e}^{-}$ |  |  |  |  |$]$

## Question 7

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{0 7 . 1}$ | silicon is less reactive than <br> carbon | ignore references to hydrogen <br> allow converse <br> allow silicon is below carbon (in <br> the reactivity series) | AO3 <br> (because) carbon displaces <br> silicon (from silicon dioxide) | (ignore (because) carbon <br> reduces silicon dioxide |
|  |  | 1 |  |  |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :---: | :---: | :---: |
| $\mathbf{0 7 . 2}$ | more energy is needed (to <br> obtain aluminium) | ignore references to electricity |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
| electrolysis |  |  |  |  |$\quad 1$| AO3 |
| :---: |
| 4.4 .1 .3 |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{0 7 . 3}$ | both products are solid |  | 1 | AO3 <br> 4.4 .1 .3 |

| Question | Answers | Extra information | Mark | AO I <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| 07.4 | $\left(M_{\mathrm{r}}\right.$ of $\left.\mathrm{SiO}_{2}=28+(2 \times 16)\right)=60$ <br> (conversion $1.2 \mathrm{~kg}=$ ) $1200(\mathrm{~g})$ | allow correct use of an incorrectly converted or unconverted mass of $\mathrm{SiO}_{2}$ <br> allow correct use of an incorrectly calculated $M_{\mathrm{r}}$ of $\mathrm{SiO}_{2}$ | 1 | $\begin{gathered} \mathrm{AO} 2 \\ \text { 4.3.1.2 } \\ \text { 4.3.2.1 } \\ \text { 4.3.2.2 } \end{gathered}$ |
|  | $\begin{aligned} & \text { (number of moles of } \mathrm{SiO}_{2}= \\ & \left.\frac{1200}{60}\right)=20 \end{aligned}$ |  | 1 | 4.3.2.2 |
|  | (number of moles of Mg $=20 \times 2)=40$ | allow correct use of an incorrectly calculated number of moles of $\mathrm{SiO}_{2}$ | 1 |  |
|  | $\begin{aligned} & \text { (mass of } \mathrm{Mg}=40 \times 24) \\ & =960(\mathrm{~g}) \end{aligned}$ | allow correct use of an incorrectly calculated number of moles of Mg | 1 |  |
|  | alternative approach: <br> $\left(M_{\mathrm{r}}\right.$ of $\left.\mathrm{SiO}_{2}=28+(2 \times 16)\right)=60$ <br> (1) |  |  |  |
|  | 48 g Mg reacts with $60 \mathrm{~g} \mathrm{SiO}_{2}$ <br> (1) <br> (conversion $1.2 \mathrm{~kg}=$ ) $1200(\mathrm{~g})$ <br> (1) | allow correct use of an incorrectly calculated $\mathrm{Mr}_{\mathrm{r}}$ of $\mathrm{SiO}_{2}$ |  |  |
|  | $48 \times \frac{1200}{60}(\mathrm{~g} \mathrm{Mg}$ reacts with $1200 \mathrm{~g} \mathrm{SiO}_{2}$ (1) | allow correct use of an incorrectly calculated mass of Mg and / or incorrectly converted or unconverted mass of $\mathrm{SiO}_{2}$ |  |  |
|  | $=960$ (g) (1) |  |  |  |

| :--- | :---: | :---: | :---: | :---: |
| 07.5 |  | AO2 <br> allow any combination of <br> $x, \cdot, 0, \mathrm{e}^{(-)}$for electrons | 1 | 4.2 .1 .4 |

| Question | Answers | Extra information | Mark | AO I <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| 07.6 | (volume of oxygen for $30 \mathrm{~cm}^{3}$ $\mathrm{Si}_{2} \mathrm{H}_{6}=3.5 \times 30$ ) $=105\left(\mathrm{~cm}^{3}\right)$ <br> (volume of excess oxygen $\begin{aligned} & =150-105) \\ & =45\left(\mathrm{~cm}^{3}\right) \end{aligned}$ <br> (volume of water (vapour) $=3 \times 30)$ $=90\left(\mathrm{~cm}^{3}\right)$ <br> (volume of gases $=45+90$ ) $=135\left(\mathrm{~cm}^{3}\right)$ <br> allowed alternative approach: $\left(\text { moles } \mathrm{Si}_{2} \mathrm{H}_{6}=\frac{0.03}{24}=\right)$ $0.00125 \text { (1) }$ <br> (moles water vapour formed $=$ $3 \times 0.00125=0.00375$ <br> and <br> (moles oxygen used $=$ $3.5 \times 0.00125=0.004375(1)$ <br> (moles excess oxygen $=$ $\begin{aligned} & \left.\frac{0.15}{24}-0.004375=\right) \\ & 0.001875(1) \end{aligned}$ <br> (volume of gases = $24 \times(0.00375+0.001875)=$ $\left.0.135 \mathrm{dm}^{3}=\right)$ <br> $135\left(\mathrm{~cm}^{3}\right)$ (1) | allow correct use of an incorrectly calculated volume of oxygen for $30 \mathrm{~cm}^{3} \mathrm{Si}_{2} \mathrm{H}_{6}$ <br> allow correct use of incorrectly calculated volumes of excess oxygen and / or water vapour <br> allow correct use of an incorrectly calculated number of moles of $\mathrm{Si}_{2} \mathrm{H}_{6}$ <br> allow correct use of an incorrectly calculated number of moles of oxygen used <br> allow correct use of an incorrectly calculated number of moles of excess oxygen and / or moles of water vapour formed | 1 <br> 1 | $\begin{gathered} \mathrm{AO2} \\ \text { 4.3.2.4 } \\ \text { 4.3.5 } \end{gathered}$ |

## Question 8

| Question | Answers | Mark | AO/ <br> Spec. Ref |
| :---: | :---: | :---: | :---: |
| 08.1 | Level 3: Relevant points (reasons / causes) are identified, given in detail and logically linked to form a clear account. | 3-4 | $\begin{gathered} \mathrm{AO1} \\ \text { 4.3.2.5 } \end{gathered}$ |
|  | Level 2: Relevant points (reasons / causes) are identified, and there are attempts at logical linking. The resulting account is not fully clear. | 1-2 | 4.4.2.6 |
|  | No relevant content | 0 |  |
|  | Indicative content <br> General principle <br> - pH depends on $\mathrm{H}^{+}$ion concentration <br> - the higher the concentration of $\mathrm{H}^{+}$ions the lower the pH <br> Strength <br> - the stronger an acid the greater the ionisation / dissociation (in aqueous solution) <br> - (so) the stronger the acid the lower the pH <br> Concentration <br> - the higher the concentration of an acid the more acid / solute in the same volume (of solution) <br> - (so) the higher the concentration of the acid the lower the pH |  |  |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{0 8 . 2}$ | the mean of titration numbers 2 <br> to 5 values is calculated <br> (because) $23.90\left(\mathrm{~cm}^{3}\right)$ is an <br> anomalous result | allow identification of titration by <br> titration number or volume | AO3 <br> allow (because) $23.90\left(\mathrm{~cm}^{3}\right)$ is <br> not concordant <br> allow (because) $23.90\left(\mathrm{~cm}^{3}\right)$ is <br> too high a value <br> allow (because) the first titration <br> is a rough value | 1 |

| Question | Answers | Extra information | Mark | AO I <br> Spec. Ref. |
| :---: | :---: | :---: | :---: | :---: |
| 08.3 | $\begin{aligned} & \left(\text { moles } \mathrm{Ba}(\mathrm{OH})_{2}=\right. \\ & \left.\frac{23.50}{1000} \times 0.100\right)=0.00235 \\ & (\text { moles } \mathrm{HCl}=0.00235 \times 2=) \\ & 0.00470 \\ & (\text { concentration }=) \\ & 0.00470 \times \frac{1000}{25.0} \\ & =0.188\left(\mathrm{~mol} / \mathrm{dm}^{3}\right) \\ & \text { alternative approach: } \\ & \left(\text { ratio } \frac{\mathrm{moles} \mathrm{HCl}}{\mathrm{moles} \mathrm{Ba}(\mathrm{OH})_{2}}=\right) \\ & \frac{2}{1}=\frac{25.0 \times \text { concentration }}{23.50 \times 0.100}(2) \\ & (\text { concentration }=) \\ & \frac{2 \times 23.50 \times 0.100}{25.00}(1) \\ & \left.=0.188(\mathrm{~mol} / \mathrm{dm})^{3}\right)(1) \end{aligned}$ | allow correct use of an incorrectly calculated number of moles of $\mathrm{Ba}(\mathrm{OH})_{2}$ <br> allow correct use of an incorrectly calculated number of moles of HCl <br> allow inverted expression <br> allow 1 mark for the expression with an incorrect mole ratio <br> allow correct use of the expression with an incorrect mole ratio | 1 <br> 1 <br> 1 | $\begin{gathered} \mathrm{AO} 2 \\ 4.3 .4 \\ \text { 4.4.2.5 } \\ \text { RPA2 } \end{gathered}$ |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{0 8 . 4}$ | there are no ions that are free to <br> move | allow there are no ions in <br> solution <br> allow there are no ions free to <br> carry the charge | 1 | AO3 <br>  |
|  | (because) barium sulfate is <br> solid / insoluble | 4.2 .2 .3 <br> (and) hydrogen ions have <br> reacted with hydroxide ions to <br> produce water | allow (and) water is a covalent / <br> molecular substance | 1 |

| Question | Answers | Extra information | Mark | AO / <br> Spec. Ref. |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{0 8 . 5} \boldsymbol{*}$ | the mixture (now) contains <br> barium ions and hydroxide ions <br> that are free to move | allow excess barium hydroxide <br> solution contains ions | 1 | AO3 |
|  |  |  | 4.2 .2 .3 |  |
|  |  |  | 4.4 .2 .2 |  |
|  |  |  | 4.4 .2 .5 |  |
