BIOL4 - Populations and environment
Mark scheme

Version: 1 Final Mark Scheme

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from aqa.org.uk

[^0]| Question | Marking Guidance | Mark | Comments |
| :--- | :--- | :--- | :--- |

| 1 (a)(i) | Birth rate and death rate fall and then <br> level out/remain <br> low/fluctuates/stabilises; | 1 |  |
| :---: | :--- | :---: | :---: |

| 1(a)(ii) | Population increases then levels <br> out/falls/fluctuates/stabilises; | 1 |  |
| :--- | :--- | :---: | :--- |

| 1 (b)(i) | $1.79 / 80$ and $84 /$ (indicates difference <br> of) 5 or 4; | 2 | Note: answers must show <br> working (as indicated in rubric) <br> to obtain full marks. |
| :---: | :--- | :---: | :--- |
|  | $2.4 .76(\%) / 4.8(\%) / 5(\%) / 5.9(\%) /$ <br> $5.95(\%) / 6(\%) / 6.3(\%) ;$ |  | 2. Accept: all answers which <br> would round up/down to give <br> equivalent answers e.g. <br> $6.329 \%$ |

| 1(b)(ii) | Named disease / named risk factor <br> which may cause higher death rate e.g. <br> heart disease/ prostate cancer / obesity / <br> stress / exercise / driving / war / smoking <br> / alcohol / less likely to visit doctor; | 1 | Accept: sex-linked disease <br> Neutral: unqualified answers <br> e.g. 'females have better <br> health/fitness/life <br> style/genetics', 'males have <br> dangerous/physical jobs', <br> 'drink more', 'poor diet' |
| :---: | :--- | :---: | :--- |

| Question | Marking Guidance | Mark | Comments |
| :--- | :--- | :--- | :--- |

\(\left.$$
\begin{array}{|c|l|c|l|}\hline \text { 2(a) } & \text { R; } & 1 & \\
\hline \text { 2(b) } & \begin{array}{l}\text { 1. Protein/amino acids broken down (to } \\
\text { ammonium ions/ammonia); }\end{array} & 2 & \begin{array}{l}\text { 1. Accept: nucleic } \\
\text { acids/RNA/DNA/urea/any } \\
\text { named nitrogen containing } \\
\text { compound as an alternative to } \\
\text { protein/amino acids } \\
\text { 2. By saprobionts / saprobiotic } \\
\text { (microorganisms); }\end{array}
$$ <br>
\hline 1. Accept: <br>
saprophytes/saprotrophs <br>
2. Neutral: decomposers <br>
2. Reject: answers where <br>
incorrect type of bacteria given <br>
as saprobionts e.g. Nitrogen <br>

fixing bacteria\end{array}\right]\)|  |
| :--- |

| 2(c) | 1.(Fertility increased as) more nitrate <br> formed / less nitrate removed/broken <br> down; <br> 2.Less/no denitrification / process P is <br> decreased / fewer denitrifying <br> bacteria;$\|$1. Accept: Nitrate remains <br> 2. Accept: more nitrification / <br> more nitrifying bacteria / <br> process R is increased |
| :---: | :--- | :---: | :--- |

\(\left.$$

\text { the soil); }\end{array} \\
\text { 3. } \begin{array}{l}\text { (Different crops have) different } \\
\text { pests/pathogens/diseases; }\end{array}\end{array} & 2 \max & \begin{array}{l}\text { 1. Accept: grow legumes / } \\
\text { named example e.g. peas, } \\
\text { beans, clover }\end{array}
$$ <br>

1. Accept: fallow year\end{array}\right\}\)| 1. Accept: use different |
| :--- |
| amounts of ions/nutrients |

| Question | Marking Guidance | Mark | Comments |
| :--- | :--- | :--- | :--- |

| 3(a)(i) | Unit of energy/mass, per area, per year; | 1 |  |
| :---: | :--- | :---: | :--- |

| 3(a)(ii) | 1. Less light / more shading / more <br> competition for light; <br> 2. Reduced photosynthesis; | 2 | Neutral: references to animals |
| :---: | :--- | :---: | :--- |
| Accept: no photosynthesis |  |  |  |

$\left.\begin{array}{|c|l|c|l|}\hline \text { 3(b) } & \begin{array}{l}\text { 1. } \begin{array}{l}\text { Pioneer species; } \\ \text { 2. } \begin{array}{c}\text { Change in abiotic conditions / less } \\ \text { hostile / more habitats/niches; }\end{array}\end{array}\end{array} \quad 3 & \begin{array}{l}\text { 3. } \begin{array}{l}\text { Increase in number/amount/diversity } \\ \text { of species/plants/animals; }\end{array} \\ \text { change or example of change } \\ \text { e.g. formation of soi//humus / } \\ \text { organic matter / increase in } \\ \text { nutrients }\end{array} \\ \text { 2. Neutral: reference to } \\ \text { change in environment } \\ \text { unqualified } \\ \text { 2. Neutral: more hospitable / } \\ \text { habitable / homes / shelters } \\ \text { 3. Accept: other/new species } \\ \text { (colonise) }\end{array}\right]$

| 3(c) | 1. Net productivity $=$ gross productivity minus respiratory loss; <br> 2. Decrease in gross productivity/photosynthesis / increase in respiration; | 2 |  |
| :---: | :---: | :---: | :---: |
| 3(d) | 1. Conserving/protecting habitats/niches; <br> 2. Conserving/protecting (endangered) species / maintains/increases (bio)diversity; <br> 3. Reduces global warming/greenhouse effect/climate change / remove/take up carbon dioxide; <br> 4. Source of medicines/chemicals/wood; <br> 5. Reduces erosion/eutrophication; | 1 max | Accept: tourism / aesthetics / named recreational activity |

| Question | Marking Guidance | Mark | Comments |
| :--- | :--- | :--- | :--- |

| 4(a) | Both alleles are expressed/shown (in the <br> phenotype); | 1 | Accept: both alleles contribute <br> (to the phenotype) <br> Neutral: both alleles are <br> dominant |
| :---: | :--- | :---: | :--- |

| 4(b) | Only possess one allele / Y <br> chromosome does not carry allele/gene <br> / can't be heterozygous; | 1 | Accept: only possess one <br> gene (for condition) <br> Neutral: only 1 X chromosome <br> (unqualified) |
| :---: | :--- | :---: | :--- |

| 4(c) | 1. $X^{G} X^{B}, X^{B} X^{B}, X^{G} Y, X^{B} Y$; <br> 2. Tortoiseshell female, black female, ginger male, black male; <br> 3. (Ratio) 1:1:1:1; | 3 | 1. Accept: equivalent genotypes where the $Y$ chromosome is shown as a dash e.g. $X^{G}$-, or is omitted e.g. $X^{G}$ <br> 1. Reject: GB, BB, GY, BY as this contravenes the rubric <br> 2 and 3. Award one mark for following phenotypes tortoiseshell, black, (black) ginger in any order with ratio of 1:2:1 in any order. <br> Allow one mark for answers in which mark points 1,2 and 3 are not awarded but show parents with correct genotypes i.e. $X^{G} X^{B}$ and $X^{B} Y$ or gametes as $X^{G}, X^{B}$ and $X^{B}$, Y <br> 3. Neutral: percentages and fractions <br> 3. Accept: equivalent ratios <br> e.g. for 1:1:1:1 allow <br> $0.25: 0.25: 0.25: 0.25$ |
| :---: | :---: | :---: | :---: |

| 4(d)(i) | Correct answer of $0.9=2$ marks;; <br> Incorrect answer but shows $\mathrm{q}^{2}=0.81=$ <br> one mark; | 2 | Note: $0.9 \%=$ one mark |
| :---: | :--- | :---: | :--- |
| 4(d)(ii) | Homozygous dominant increases and <br> homozygous recessive decreases; | 1 |  |

| Question | Marking Guidance | Mark | Comments |
| :--- | :--- | :--- | :--- |

| 5(a) | Oxygen production/concentration and <br> time; | 1 | Accept: oxygen <br> volume/concentration <br> Reject: oxygen uptake |
| :---: | :--- | :---: | :--- |
| Neutral: reference to carbon <br> dioxide uptake |  |  |  |

| 5(b) | 1. Intensity of light; <br> 2. Amount/number/mass/species of <br> algae/photosynthesising cells; | $2 \max$ | 1. Accept: distance from light |
| :---: | :--- | :--- | :--- |
|  | 3.Carbon dioxide (concentration/partial <br> pressure); <br> 4. <br> Time; |  |  |

| $5(\mathrm{c})$ | 1.(pH) increases; <br> 2.As (more) carbon dioxide removed <br> (for photosynthesis);$\|$1. Neutral: becomes more <br> alkaline/less acidic |
| :---: | :--- | :---: | :--- |

| 5(d) | 1.Less absorption / (more) reflection <br> (of these wavelengths of light); | 2 max | 2.(Light required) for light dependent <br> (reaction)/photolysis <br> 3.(Represents) green light / colour of <br> chlorophyll; |
| :---: | :--- | :---: | :--- |
| 1. Reject: no absorption or <br> cannot absorb unless in <br> context of green light. |  |  |  |
| Note: no green light absorbed <br> or green light reflected $=2$ <br> marks. |  |  |  |
| 2. Accept: for |  |  |  |
| excitation/removal of electrons |  |  |  |
| (from chlorophyll) |  |  |  |

| Question | Marking Guidance | Mark | Comments |
| :--- | :--- | :--- | :--- |

| 6(a) | 1. Oxidation of/hydrogen removed from <br> pyruvate and carbon dioxide <br> released; <br> 2. Addition of coenzyme A; | 2 | Accept: NAD reduced for <br> oxidation |
| :---: | :--- | :---: | :--- |
| 6 (b)(i) | 1.Change (in shape) of active site / <br> active site moulds around the <br> substrate; <br> 2. (Substrate/active site) now <br> complementary; | 2 | 1. Reject: reference to inhibitor <br> 1. Accept: change in tertiary <br> structure affecting active site |
| Neutral: references to two <br> active sites |  |  |  |

\(\left.$$
\begin{array}{|c|l|c|l|}\hline 6 \text { (b)(ii) } & \begin{array}{l}\text { 1. Is a competitive inhibitor / attaches } \\
\text { to active site; }\end{array} & 2 & \begin{array}{l}\text { 1. Neutral: reference to } \\
\text { inhibitor forming an enzyme- } \\
\text { substrate complex }\end{array} \\
\text { Reduces/prevents enzyme- } \\
\text { substrate/E-S complex forming; }\end{array}
$$ \quad \begin{array}{l}2. Accept: Reduces/prevents <br>
acetylcoenzyme A binding to <br>

enzyme/citrate synthase\end{array}\right]\)

| 6 (c)(i) | 1. Regenerates/produces NAD / <br> oxidises reduced NAD; <br> 2. (NAD used) in glycolysis; | 2 | 2. Accept: description of <br> glycolysis <br> 2. Accept: glycolysis can <br> continue/begin |
| :---: | :--- | :---: | :--- |

| 6(c)(ii) | (Pyruvate used) in aerobic respiration / <br> (lactat//lactic acid) is <br> toxic/harmful/causes cramp/(muscle) <br> fatigue; | 1 | Accept: (pyruvate) can enter <br> link reaction |
| :---: | :--- | :---: | :--- |
| Accept: reduces |  |  |  |
| cramp/(muscle) fatigue |  |  |  |
| Neutral: 'reduces muscle <br> aches' |  |  |  |

| Question | Marking Guidance | Mark | Comments |
| :--- | :--- | :--- | :--- |

$\left.\begin{array}{|c|l|c|l|}\hline 7(\mathrm{a}) & \begin{array}{l}\text { 1. Increase in temperature / (global) } \\ \text { warming; } \\ \text { 2. Evaporation (of water from the soil) / } \\ \text { flooding by sea water / less rainfall; }\end{array} & 2 & \begin{array}{l}\text { 1. Neutral: increase in sea } \\ \text { temp } \\ \text { 2. Reject: evaporation of sea } \\ \text { water }\end{array} \\ \text { 2. Accept: increase in sea } \\ \text { level with effect on land / } \\ \text { coastal flooding }\end{array}\right]$

Accept: grow at 1.5\% } \\ \text { Neutral: bias/reliability }\end{array}\right]$

| 7(c)(ii) | 1. Mean/number (of diseased plants) decreased by all (bacteria); <br> 2. S. rhizophila is most effective and $S$. plymuthica is least effective; <br> 3. Overlap of SE of S. plymuthica with control (B) / overlap of SE of $S$. rhizophila with P. extremorientalis / no overlap of SE of S. rhizophila/P. fluorescens/P. extremorientalis with control (B); <br> 4. No overlap of (2x) SE indicates | 4 | 2. Accept: reference to figures (10 and 42) <br> 2. Accept: equivalent terminology to effectiveness <br> 3. Neutral: SE of all treatments overlap <br> 3. Neutral: overlap of SE of PF and PE on its own <br> 3. and 4. Penalise reference to SD instead of SE in context of these mark points only once |
| :---: | :---: | :---: | :---: |

|  | difference is significant/not down to <br> chance / overlap of (2x) SE indicates <br> difference is not significant/is due to <br> chance; | i.e. use of SD = max one for <br> mp 3 and mp 4. Do not <br> penalise SD in any other <br> context |
| :--- | :--- | :--- |
| 4. Accept: 'results are |  |  |
| significant' as equivalent to |  |  |
| difference is significant |  |  |
| Neutral: reference to other |  |  |
| factors or sample size |  |  |

| 7(c)(iii) | 1. Comparison / (is a) benchmark/standard/baseline: <br> 2. To see effect of added/no fungus / (compare to) control B / (control A) shows effect of fungus in soil / shows natural/normal infection/disease; | 2 | 1. Accept: CFRR as equivalent to fungus <br> 1. Reject: if comparison is made to factors not part of this investigation e.g. pesticides <br> 2. Neutral: to see effect of treatments/bacteria/biological agents/other factors <br> 1 and 2. Note: Compare to control $\mathrm{B}=2$ marks |
| :---: | :---: | :---: | :---: |

| 7 (d)(i) | (Bacteria) are nitrogen fixing/nitrifying / <br> reduce infection/pathogens / produce <br> growth stimulating substance; | 1 | Accept: description of <br> nitrogen-fixing or nitrification <br> but not 'produce nitrate' <br> unqualified <br> Accept: produce antibiotics |
| :---: | :--- | :---: | :--- |

| 7(d)(ii) | 1.Compete for/use <br> minerals/salts/ions/nutrients/light; <br> 2. Would reduce/affect <br> growth/productivity/(dry) mass of <br> cucumber; | 2 | 1. Accept: named example of <br> minerals/nutrients e.g. nitrates |
| :---: | :--- | :---: | :--- |
|  |  | 1. Accept: weeds may <br> introduce/carry <br> pathogens/disease <br> 1. Accept: water |  |
| 1. Neutral: |  |  |  |
| food/space/resource |  |  |  |

| Question | Marking Guidance | Mark | Comments |
| :--- | :--- | :--- | :--- |

| 8(a) | 1. Geographic(al) isolation; <br> 2. Separate gene pools / no interbreeding/gene flow (between populations); <br> 3. Variation due to mutation; <br> 4. Different selection pressures / different abiotic/biotic conditions/ environments/habitats; <br> 5. Different(ial) reproductive success / selected organisms (survive and) reproduce; <br> 6. Leads to change/increase in allele frequency; | 6 | 2. Accept: reproductive isolation <br> 2. This mark should only be awarded in context of during the process of speciation. Do not credit if context is after speciation has occurred. <br> 4. Neutral: different conditions/ /climates if not qualified <br> 4. Accept: named abiotic/biotic conditions <br> 5. Accept: pass on alleles/genes to next generation as equivalent to reproduce <br> 6. Accept: increase in proportion/percentage as equivalent to frequency |
| :---: | :---: | :---: | :---: |

| 8(b) | 1. Capture/collect sample, mark and release; <br> 2. Method of marking does not harm lizard/make it more visible to predators; <br> 3. Leave sufficient time for lizards to (randomly) distribute (on island) before collecting a second sample; <br> 4. (Population $=$ ) number in first sample $\times$ number in second sample divided by number of marked lizards in second sample/number recaptured; | 4 |  |
| :---: | :---: | :---: | :---: |
| 8(c) | 1. High concentration of/increase in carbon dioxide linked with respiration at night/in darkness; <br> 2. No photosynthesis in dark/night/ photosynthesis only in light/day; <br> 3. In light net uptake of carbon dioxide / use more carbon dioxide than produced / (rate of) photosynthesis greater than rate of respiration; <br> 4. Decrease in carbon dioxide concentration with height; | 5 | 2. Neutral: less photosynthesis <br> 4. More carbon dioxide absorbed higher up <br> 4. Accept: less carbon dioxide higher up / more carbon dioxide lower down <br> 5. Neutral: less leaves unqualified or reference to animals |

|  | 5. (At ground level) <br> less photosynthesis / less <br> photosynthesising tissue / more <br> respiration / more micro-organisms / <br> /micro-organisms produce carbon <br> dioxide; |  |  |
| :--- | :--- | :--- | :--- |
